- Dutch
Native

I am a keen and driven full-stack developer, with a strong inclination towards abstract problem-solving. Away from development, I spend a lot of time around music, both attending shows and playing them, and love to watch terrible movies.

PROJECTS

During my time at the EyUp Coding Academy we built a range of projects. Below are a few of my favourites. More can be found in my portfolio.

JavaScript Game

Gopher Glory
A browser game built using JavaScript. Players have to try to locate all the targets before they run out of lives. On this project I was responsible for programming game logic and board generation.

Property Listing Website

Penny Lane Properties
A mock property listing website built using MySQL, PHP, and Bootstrap 5. Data was taken from a pre-built RESTful API.

WORK EXPERIENCE

Bartender/Box Office Agent (July 2021 - May 2022)
Fulford Arms

At The Fulford Arms the role came with all the normal responsibilities of a bartender; serving customers and maintaining safety, whilst also being compounded with the additional challenges of working in a music venue, such as working in an often loud and dark environment. As a Box Office Agent I was responsible for selling and checking tickets upon entry to the venue, as well as ensuring that noise levels were kept within the required level.

Dutch/English Customer Service Advisor (June 2018 - September 2019)
Gear4music

When starting this role I was the only member of the Dutch-speaking team, and therefore had to take responsibility for the majority of the admin tasks, whilst still performing my role as a customer service agent. This required frequent interdepartmental communication and problem solving, as well as communicating with various external parties, such as couriers and suppliers. During my time at this role I readily worked weekends and overtime during busy periods.

Dutch/English Customer Service Advisor (July 2017 - February 2018)
Vision Direct

EDUCATION

EyUp Coding Academy (April 2022 - June 2022)
Full Stack Web Development

EyUp Coding Academy is a bootcamp operated by WANDisco in Sheffield, taught by trainers from the iO Academy. This 16 week course covered programming fundamentals in an industry context, with projects being completed following AGILE methods and SOLID principles.
